

UNIQUE METALLIC ADHESIVES AND PUTTIES

High Bond Strength, Thermal Shock and Impact Resistance

DURABOND™ 950 - 952 - 954

2000°F Metallic Adhesives

Durabond Adhesives and Putties were specially formulated to bond metals, ceramics and dissimilar materials for use to 2000°F.

These metallic composite adhesives overcome the brittle bonds obtained with ceramics and offer some of the ductility and impact resistance associated with soldering and welding.

Durabond Adhesives can be drilled, tapped, machined, etc.

Durabond adhesives are inorganically bonded and chemically cured.

Contains no Epoxies or Silicones which would limit their use to 600°F.

Safe and easy to use. Just mix, apply and cure at room temperature. No odors. No VOC's.

Fast Setting Durabond Composites (type FS) are now available. These smooth, creamy, putties are ideal for repairs, patching, casting, potting, etc.

Aluminum Durabond 950 - Usable to 1200°F

This adhesive was developed for high strength and high temp. bonding. Its easy to apply and cures at low temp. Use with steel, cast iron, aluminum, copper, etc.

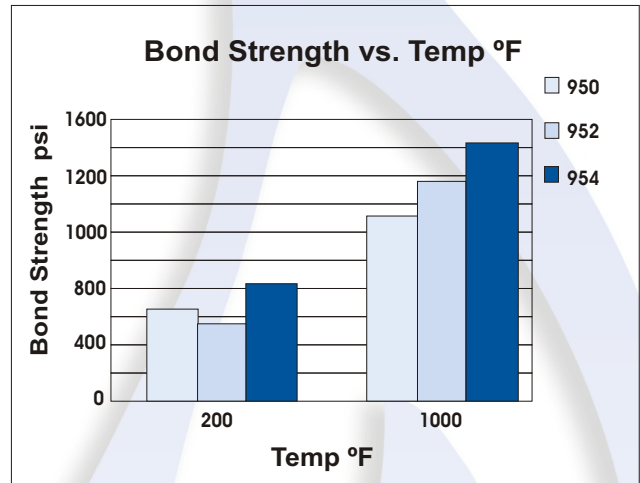

Its easily machinable. Can be ground, sanded or polished.

Nickel Durabond 952 - Usable to 2000°F

952 was specially formulated to be a low expansion, metallic adhesive for bonding 400 series Stainless Steel, low expansion high temp. alloys, metals and ceramics, etc.

Stainless Steel Durabond 954 - Usable to 2000°F

954 is a high expansion adhesive for high temp. bonding of 300 series Stainless Steels, high expansion metals and ceramics, etc.

Durabond 954 Bonds a Stainless Filter Cartridge for use at 1200°F
